

Migration from AssetCenter 4.x to Asset Manager 5.x

Classroom Training for HP AssetCenter Customers

This course is designed for customers who are planning a migration or are in the process of migrating from AssetCenter to Asset Manager.

Training Objectives:

This 3-day course was developed “from the field for the field” and will provide the participants a wealth of useful information derived from practical experience, which will enable them to plan and execute a successful migration from AssetCenter 4.x to Asset Manager 5.x. An exercise involving a realistic migration from AC 4.3 to AM 5.1 will reinforce those key points that need to be observed when doing a migration. Participants will acquire the kind of useful insights, technical and “how-to” information that will not only result in an efficient migration, but help reduce the costs that it involves

Intended for:

AssetCenter administrators, developers and technical project leaders

Content:

- Overview of the migration process and planning requirements (including how to minimize downtimes as you go live)
- Preparing the software migration and important issues to keep in mind
- Changes in structures between AC 4 and AM 5
- Performing a technical migration
- Necessary modifications to scripts/workflows/actions
- Necessary modifications to views
- Required changes in the display masks for the web client
- Modified roles concept as a new feature
- Customer-specific Q+A session about the migration

Duration: 3 days

Class Size: up to 8 people

Prerequisites:

- Thorough understanding of AC 4.x and
- Solid developer skills in this application

Recommended Follow-Up Courses:

- Asset Manager Web and Web Services
- HP Asset Manager 5.x Modules
